LOTTE INDIA CORPORATION LIMITED - A REVIEW

Lotte India has been instrumental in creating 'Pie' category in India -Lotte Choco Pie enjoys near monopoly status. Lotte India Corporation Limited came into existence post the takeover of Parrys Confectionery from Murugappa Group in 2004.

Different kind of machines are used to fill the Lotte-Choco Biscuit with marsh mellow and packaged.

The entire process of making and packing Biscuits is done with machines. There is no human contact with the biscuits. The machines have an in-built scanner that scans all the biscuits, identifies the defected one and rejects it from packing.

EXPERIENTIAL LEARNING BY ATTENDEES:

The main technical concept is on MicroControllers.

MICROCONTROLLER:

A **Microcontroller** is an IC chip that executes programs for controlling other devices or machines. It is a micro (small size as its an Integrated Circuit chip) device which is used for control of other devices and machines.

It is a Microprocessor having RAM,ROM and I/O ports. Microcontroller is termed as "Computer-on-a-Chip".

Micro controllers are task specific and are essentially used for making Embedded Systems.

There are a number of **advantages** to using micro- controllers in industry. Some of the major **advantages of microcontrollers** are that they are reusable, dependable, cost effective, and energy efficient. need for skilled programmers and the sensitivity of the controllers to electrostatic charges.

Embedded Basics - Understanding the Microcontroller Boot Process:

The microcontroller boot process starts by simply applying power to the system. Once the voltage rails stabilize, the microcontroller looks to the reset vector for the location in flash where

the start-up instruction can be found. The reset vector is a special location within the flash memory map
